

Create talking props for stories, pretend play and many other activities easily. In this photo, a Taction Pad was adhered to the pumpkin. When the “pumpkin” was touched, the communication device activated. Single and multi-message devices such as the Chipper, Sequencer and Randomizer work great for this activity. The “pumpkin” switch could also be used to activate environmental controls (turn on the Halloween lights) or as a switch to initiate scanning (the “pumpkin” switch is certainly more interesting than the Taction Pad by itself). Be creative, Taction Pads will adhere to most objects.
