

In this example, a children's book was adapted to be used with a Sequencer. The squeeze part of the book (Barney) was adapted to be used with a pneumatic switch by attaching tubing to the squeaker. The Pneumatic Switch was attached to the tubing. Barney is now your switch. Using sequential messaging, every time the page is turned and Barney is pushed, the text will be played. You can also use a Chipper for a single message such as a repetitive line or VoicePal Levels in sequential messaging for this activity.
