

For this application, we used a Y-connector, two large Pal Pads, Overlay Pockets, a Sequencer and a book. We placed one Overlay Pocket on the inside of the front cover and one Overlay Pocket on the inside of the back cover. We slipped a Pal Pad into each of the Overlay Pockets. Each Pal Pad is connected to the Y-connector, and the Y-Connector is plugged into the Sequencer. This book is ideal for two students reading a book together. When a Pal Pad is touched, the Sequencer plays a message. It's a great way to learn turn-taking!
